

## Leading technology now allows you to write additional information to the microchip

RT100 V8  
Reader/  
Writer

Simple to use system now allows you to write additional information to the chip before or after implantation, with the RT100 V8 Reader/Writer, the RT150 Writer or the RT250 Stick Reader/Writer.

Include the owner's phone number/s and/or the pet's Vaccination Data.

RT150  
Writer

At Micro Products Australia our aim is to bring you the latest and best RFID products at the lowest price possible.

First in Australia with the Minichips (40% smaller than a standard microchip) and now another first with the industry leading technology aimed at re-uniting lost pets as quickly as possible.

Now the owner's telephone numbers and/or Vaccination Data can be added to the Minichip. Rangers simply scan the lost pet and ring the owner directly.

Writing the information to the Minichip or updating information after implantation can be done with the RT100 V8 Reader/Writer, the RT150 Writer or the RT250 Stick Reader/Writer.

Either way takes but a couple of minutes!

For more information contact Micro Products Australia on (08) 9456 1319 or email [microproductsaustralia@bigpond.com](mailto:microproductsaustralia@bigpond.com)

\*Please note that having the telephone numbers on the Minichip does not negate the need to Register the animal on a National Register.
