

PET RECOVER

PET RECOVER is a QR coded collar tag designed to recover your pet if it ever strays.

When the QR coded collar tag is scanned with a Smartphone device, the pet's owners contact details and other relevant information about the pet will appear on your device. Anyone who finds your pet can immediately contact you as the pet's owner and have instant access to other important data such as any medical information.

The pet's data can only be entered and modified by its owner who must activate and register the QR coded collar tag before entering this data.

How it works?

The easiest way to access your pet's web profile is by scanning the QR code marked on the coded collar tag. You will need a Smartphone device with internet connection, a built-in camera and an application capable of reading QR codes.

There are plenty of free downloadable QR code applications available from your Smartphone's Play Store:

NeoReader

Quick Scan

Qrafter

i-nigma

If you do not have access to a Smartphone device, simply type the web address located at the bottom of the QR coded collar tag in any internet web browser and automatically be directed to that particular pet's profile.

Example: <http://f-res/P69XQB8>

Regardless of the method chosen, you will automatically be redirected to a web page where you will find the pet's profile with all its data.
